Your server should have a recommended minimum 256 MB of RAM and 1 GB of disk space. This 64-bit edition will run on AMD64 and Intel x64-based computers.

Ubuntu is an ancient African word meaning 'a shared humanity'. All the software on this DVD is legal to copy and share, so feel free to pass it on. That's the spirit of free and open-source software.

implied warranty of merchantability, satisfaction or fitness for a particular use. See the licence included with each program for details. Source code for Ubuntu can be downloaded from archive.ubuntu.com or can be obtained from Canonical at the cost of the media and shipping. Ubuntu, the Ubuntu logo and Canonical are registered trademarks of Canonical Ltd. All other trademarks are the property of their respective owners.

This is the lean server and cloud version of Ubuntu, the world's favourite free operating system. Ubuntu has been adopted as a trusted server platform by large and small organisations alike. It powers some of the world's biggest websites, and it's the most popular OS for cloud deployments. Whether you're deploying a fanless home server or a fifty-thousand node rendering cluster, you're in good company with Ubuntu. It's easy to install and maintain – and it includes free security updates.

Ubuntu comes with the world's largest selection of pre-packaged server software, so you can deploy web, email, file and database servers with ease. New Metal-as-a-Service (MAAS) brings cloud semantics to the bare metal – so you can deploy complex systems onto your server clusters easily, scale them up and down and connect them to the cloud, all through a web interface.

This DVD contains everything you need to build an OpenStack-based private cloud. It's a great way to get up and running with the cloud. And with Juju, you can deploy, scale and re-use cloud services easily. Learn more at juju.ubuntu.com

Canonical helps many of the world's best-known organisations make the most of their Ubuntu deployments. We offer consulting, training and support services, plus systems management tools for large server, desktop and cloud deployments.
